

File Integrity Monitoring in Wazuh

1 Introduction

Attackers don't always just break into systems — they change them. For example, ransomware encrypts files, attackers modify logs, and other malicious actions alter system data. Detecting these changes quickly is critical.

File Integrity Monitoring (FIM) is a security practice that tracks file and directory modifications in real time and generates alerts when suspicious activity is detected.

FIM is also a key requirement for many regulatory compliance standards, including **PCI-DSS, HIPAA, and ISO 27001**.

This guide demonstrates how to configure **Wazuh's FIM feature** on a Windows endpoint. It assumes Wazuh is already installed and that the Wazuh agent is deployed on the target machine.

2 Configuring Wazuh FIM on Windows

This guide assumes that Wazuh is already installed and the agent is deployed on a Windows machine. To monitor specific files or folders with Wazuh's FIM feature:

1. Open the Wazuh agent configuration file on the endpoint:

```
/var/ossec/etc/ossec.conf
```

2. Within the `<syscheck>` block, add the directory you want to monitor. Example: monitoring a folder on the Windows desktop.

```
<directories check_all="yes" report_changes="yes" realtime="yes">  
  C:\Users\dell\OneDrive\Bureau  
</directories>
```

3. (Optional) Control subdirectory monitoring with the **recursion level** attribute:

- 0 – monitor only the specified folder
- 1 – monitor the folder and immediate subfolders
- 2 – monitor the folder and all nested subfolders up to two levels deep

4. Save the file and restart the Wazuh agent:

```
sudo systemctl restart wazuh-agent
```

3 Validation: Monitoring in Action

After configuration, Wazuh will begin tracking file activity in the specified path.
As shown in Figure 1 and Figure 2, the test file `file.docx` was:

- Created
- Modified several times
- Deleted

Each of these actions was detected and reported by Wazuh, triggering alerts with appropriate rule levels.

```
<!-- File integrity monitoring -->
<syscheck>

  <disabled>no</disabled>

  <!-- Frequency that syscheck is executed default every 12 hours -->
  <frequency>43200</frequency>

  <!-- Default files to be monitored. -->
  <directories check_all="yes" report_changes="yes" realtime="yes">C:\Users\dell\OneDrive\Bureau</directories>
  <directories recursion_level="0" restrict="regedit.exe|system.ini|win.ini">%WINDIR%</directories>

  <directories recursion_level="0" restrict="at.exe|attrib.exe|cacls.exe|cmd.exe|eventcreate.exe|ftp.exe|lsass.exe|net.e
  <directories recursion_level="0">%WINDIR%\SysNative\drivers\etc</directories>
  <directories recursion_level="0" restrict="WMIC.exe">%WINDIR%\SysNative\wbem</directories>
  <directories recursion_level="0" restrict="powershell.exe">%WINDIR%\SysNative\WindowsPowerShell\v1.0</directories>
  <directories recursion_level="0" restrict="winrm.vbs">%WINDIR%\SysNative</directories>

</syscheck>
```
